

**Immersion operation**

When installing the sensor in immersion assemblies, please ensure that a sufficient wall distance is observed during operation.

- For this reason, select an installation location in which **a minimum wall distance of 150 mm (6")** is observed even with varying levels or altered flow profiles.

Mounting in a suspended assembly with chain must therefore be avoided.

- The sensor must immerse at least 40 mm (1.5") into the medium.
