Colorimeter Colorcatch 2
VF0700

The ColorCatch 2 fits in a pocket and allows any professional who works with colors to measure and match with their own color cards (NCS, RAL...) any paint on a flat or structured surface.

Its use is simple: place the ColorCatch 2 flat on the surface, click and instantly it will indicate the two nearest color codes it has found in its palette.

With this new apparatus, TQC makes it possible to the customers to download - via www.colorix.com/update - the updates of the colour cards in the ColorCatch 2, and this 24h/24 and at a price definitely more advantageous than for other versions that require the return of the apparatus by postal mail.

Among the list of colour cards available for the customer, you can decide if you wish to charge one, several or all the colour cards.
In the same way, if an additional colour card is put on the market, it is possible to download it.

The memory size of the apparatus is of 100.000 colour codes (options with 200.000 and 400.000 colour codes possible).

With this new version, it's also possible to select the language.

Moreover, this new version opens the possibility of connecting the apparatus to the tinting machines. Each ColorCatch 2 is provided with a mini USB two meters long cable.

FEATURES:

Battery:	9 V · 6LR61
Autonomy:	over 2000 measurements
Dimensions :	120 x 40 x 35 mm
Weight:	99 grams (excl. battery)
