

BOD measurements/Respiration

Biological Oxygen Demand

BOD measurement according to EN 1899-1 and EN 1899-2 and for self-checks

Biological Oxygen Demand (BOD) is an important parameter in water resource management. BOD is a parameter used to measure the quality of water and treatment results in wastewater. In addition, BOD analysis potential is used in the planning and design wastewater treatment facilities.

In routine use BOD determination is used to check the wastewater in the inflow and discharge of wastewater treatment plants. Depending on the measurement site and type of wastewater the BOD value can lie between a few mg/l and several thousand mg/l. Several methods are available for carrying out the measurement.

WTW offers various measuring systems for these methods.

In “dilution BOD” the oxygen content of a sample is measured with an oxygen sensor before and after an incubation period of 5 days. The difference between the measurements is the BOD₅ value; this is the official EPA method.

In “BOD self-checks” with the respirometer the reduction in oxygen causes a definite pressure difference which can be measured by a pressure sensor. This method is very easy to carry out and is a practical method.

Also both methods are very different, the measurements correlate for discharge analysis in municipal wastewater treatment facilities. Both methods requires the samples to be kept at 68 °F (20 °C) for 5 days. WTW offers a wide range of temperature controlled incubators.

Depletion/Respiration

In the course of growing environmental consciousness, microbiological degradability tests have become increasingly important. These can be, for example, soil surveys from waste sites or environmental impact surveys for new chemical substances. The necessary respiration measurements for anaerobic or aerobic degradation can be easily carried out using the OxiTop®-C systems with excellent analysis. WTW offers a wide range of application specific packages with appropriate sample vessels.

Dilution BOD

according to DIN EN 1899-1 and DIN EN 1899-2; official EPA method

inoLab® BSB/BOD 740 inoLab innovations that make sense

- Simple sample management
- Automatic BOD calculation
- EPA approved

flexible and powerful

This laboratory oxygen meter has been specially developed for BOD_n measurements. BOD measurements are determined by regulation EN 1899-1 and is **EPA approved**. You can store up to 7 of your own routines for frequently occurring dilution ratios. A maximum of 30 measuring samples each with 18 dilutions allow the management of up to 540 diluted samples. The inoLab® BSB/BOD 740 can also be used as a conventional high-end oxygen meter (For technical data such as inoLab® Oxi 740 refer to page 33). Additional memory and editing options are available when operated using the MultiLab® pilot. The entire measurement and sample management can thus be easily handled via PC.

In combination with StirrOx® G with its automatic start/stop function the inoLab® BSB/BOD 740 is the ideal measuring system for routine oxygen measurement in the BOD₅ determination according to DIN EN 1899-1 and DIN EN 1899-2.

Special features:

- BOD/depletion
- Determination of the biochemical oxygen demand according to DIN EN 1899-1
- Determination of oxygen depletion according to DIN 38 414 P6
- Up to 5 samples for dilution water
- Up to 30 measuring samples
- Up to 18 dilutions per measuring sample
- Up to 7 routines can be stored
- Adjustable incubation time, 5 ... 30 days

Additional features when using the MultiLab® pilot:

- Management of an arbitrary number of samples
- Max. of 32 dilutions per measuring sample
- Max. of 32 dilution waters (blank solutions)
- Adjustable incubation period, 1 to 32 days
- Allocation of names for dilution waters, samples, diluted samples and routines (max. of 255 characters per name)
- Warning indication for BOD values that are too high or too low
- Calculations by mouse click
- Automatic protocols

ProfiLine Oxi 197i

- EPA approved method
- Accurate
- Battery and line power operation

Laboratory oxygen meter ProfiLine Oxi 197i with self-stirring oxygen sensor StirrOx® G.

StirrOx® G

Self-stirring oxygen sensor – simultaneous stirring and measurement

- Single-handed operation for series measurements
- Constant flow for high reproducibility
- Immediately ready for measuring – no polarization period required
- Extremely low self-consumption of oxygen – only 0.008 µg h⁻¹ (mg/l)⁻¹
- Zero-current free – no zero point calibration necessary
- With calibration and storage vessel OxiCal®-ST as standard
- Membrane life – Up to 6 months
- Temperature compensation with 2 built-in sensors
- Membrane leakage monitoring – damaged membranes are indicated

Respiration/Biogas Determination with OxiTop® and OxiTop® Control

OxiTop® & OxiTop® Control

- Undiluted samples
- AutoTemp function for delayed start of cold samples
- Non-volatile memory of measured values

Mercury-free measurement

Biochemical oxygen demand BOD determination is still one of the most important parameters in water resource management. It can be used to evaluate the impact of biodegradable substances in waters and wastewater. With its OxiTop® systems, WTW offers a unique, modular and mercury-free instrument system. It is not only suitable for BOD determination, but also for measuring biodegradability and depletion.

The advantages of **OxiTop®** and **OxiTop® Control**: simple operation, improved controllability and non-toxicity, and measuring ranges of up to 400 000 mg/l BOD (with OxiTop® Control OC 110). As the measured pressure is automatically converted the values can be directly read as mg/l BOD.

OxiTop® Complete Sets for 6 or 12 Measuring Vessels

The complete packages have been assembled so that they contain everything necessary to carry out the measurements. The make up of each package depends on the application and varies by number of vessels, controllers and utensils for sample preparation.

Special stirring platforms were developed in order to maintain a constant temperature and guarantee optimum oxygen distribution in the sample. These stirrer platforms have space for either 6 or 12 standard bottles or 6 large vessels for special applications.

BOD self-check measurement

OxiTop® IS 6, IS 12

- High-precision
- 5-day automatic storage of measured values
- Mobile
- Extendable

OxiTop® IS 12

Complete packages for 6 or 12 simultaneous measurements

Measurement using OxiTop® is based on pressure measurement in a closed system: microorganisms in the sample consume the oxygen and form CO₂. This is absorbed by NaOH, creating a vacuum which can be read directly as a measured value in mg/l BOD.

The used sample volume regulates the amount of oxygen available for a complete BOD. Measurement ranges of up to 4,000 mg/l can be measured using different volumes.

The OxiTop® heads (green and yellow for differentiation of inflow/outflow) have an AutoTemp function: if the sample

temperature is too cold, the start of measurement is automatically delayed (by at least 1 hour) until a constant temperature has been reached.

Apart from the automatic storage of 5 measured values (1 value per day), further measured values can be read at all times during or after the period of 5 days, which permits the tracking of check values or measurements over longer periods.

Technical Data OxiTop®-C Measuring Head		
Measuring principle	Manometric with pressure sensor	
Measurement of	BODn

BOD self-check measurement – for a larger number of samples

with simple sample management

OxiTop® Control 6, Control 12

- Controller-driven
- Simultaneous measurement of up to 100 samples
- Statistical evaluation
- Automatic sample ID
- Worldwide approved method

Complete package for 6 or 12 simultaneous measurements

OxiTop® Control is the logical further development of the successful OxiTop® system using software-controlled functions and infrared interface to communicate with a handy controller, the OC 100. This system enables the simultaneous and grouped start, management, storage and tracking

of 100 measuring heads via the controller and tracked on a large display with graphic evaluation. Data can be transferred to the PC for evaluation and documentation via the **AK-540/B** cable (order no. 902 842) and the communication program **Achat OC** (order no. 208 990).

Controller OC 110 in combination with the OxiTop® Control S6 / S12 is ideal for users with other applications apart from BOD (see page 74).

OxiTop® Control 12

Check sampling progress!

The data can be called up at any time, even during sampling, thus enabling checking of the samples for errors. The display of the progress curve allows immediate detection of irregularities and interferences, such as a BOD value set too high for the volume used or undesired nitrification. Corrections can thus be made at an early stage.

common features

- Simultaneous sample management with option of grouping up to 100 OxiTop®-C measuring heads.
- Data call-up of one parallel sample with statistical evaluation and as individual data.
- Automatic calculation and graphical display of BOD value.
- Data transfer even through glass doors.
- Protocol and documentation of data via Achat OC communication program in combination with a PC
- GLP and AQS with inspection intervals for calibration with the OxiTop® PM calibration tablets (see page 70: Accessories)

OxiTop® OC 100

OxiTop®-C Measuring Head

- Instead of the display and keys, the OxiTop®-C measuring head has an infrared interface with which it communicates with Controller OC 100 or OC 110. By “pointing” the controller at an OxiTop®-C measuring head it can be identified and started, data can be called up or deleted and sampling progress can be displayed.
- Each measuring head has its own identification number; this means that manual identification of samples is no longer necessary, even for parallel samples. In addition, statistical evaluations can be easily performed for parallel samples.
- The OxiTop®-C measuring heads have an AutoTemp function for delaying the start of samples which are too cold by up to 4 hours. This mode can be deactivated for BOD standard.
- The measuring heads can store up to 360 data sets. Data are automatically stored in the corresponding interval according to the interval period set (0.5 h to 99 days).
- The built-in pressure sensor can register differences in pressure ranging from 500 to 1,350 hPa.

System Extensions and general Accessories

OxiTop® Measuring Heads & SETs

... for Retrofitting

In order to meet the growing demand and the extension of potential applications, OxiTop® and OxiTop®-C systems are also available as individual items in different combinations, such as:

- Individual measuring heads OxiTop®/OxiTop®-C
- A set of two OxiTop® heads (yellow and green).
- Upgrade sets for a further 6 positions with 6 heads each and flasks, sleeves and stirring bars, as well as the stirring platform.

Stirrers

... for BOD measurement

Stirrers IS 6 and IS 12 have been specially developed for BOD measurement with the OxiTop® system. Software-controlled speed regulation prevents the magnetic stirrer bar from getting caught or wobbling.

The speed is selected so that an optimal gas exchange with the sample takes place. The stirrer is maintenance-free and non-wearing as it contains no moving parts.

The IS 6-Var model has been specially developed for use with large measuring vessels and has space for 6 measuring vessels. Its outer dimensions are identical to those of the IS 12.

Stirrer IS 6 and IS 12

IS 6-Var

Testing Aids for the OxiTop® system for Quality Control

Two testing aids are available for monitoring measurement and checking system leakage, which can be called up during a corresponding time interval using the AQA function in the controller.

OxiTop® PM

These calibration tablets simulate a complete BOD and perform quantitative monitoring of measurement (approx. 308 mg/l, batch-dependent) as well as checks for leakage over the entire period.

OxiTop® PT

This testing aid performs a "quick" check for under-pressure and leakage. The OxiTop® contains the pressure table required for the individual place of installation. OxiTop®-C automatically includes these values.

General Accessories

Storage racks

For safe storage of OxiTop® measuring systems and OxiTop®-C measuring heads, for 6 measuring heads each.

Marking rings

For identification of BOD bottles for OxiTop® instruments.

Overflow measuring flasks

... in different standard sizes for OxiTop®

Apart from the supplied 164 ml and 432 ml overflow measuring flasks contained in the standard scope of supply, the following sizes are also available: 22.7 ml, 43.5 ml, 97 ml, 250 ml, 365 ml.

Depletion/Respiration with OxiTop® Control OC 110

The investigation and monitoring of biological cleaning treatment processes are becoming more and more important with respect to the environmental requirements such as wastewater treatment, soil remediation and waste treatment.

Biological tests are often in the foreground as well as the usual physical-chemical measuring methods. In order to determine the biodegradability of foodstuffs, pollutants, harmful substances or waste substances and the microbial activity so-called respiration (depletion) measurements are often carried out. In these measurements the respiration of the organisms is determined under defined conditions as the oxygen uptake or release of carbon dioxide.

Measurements are carried out via closed systems using the OxiTop®-C in combination with the OC 110 controller. Depending on the field of use, specially adapted measuring vessels, which are all equipped with the necessary connection thread and some of which are autoclavable, come into operation. For this task there are various complete packages available which come equipped with all required utensils.

For the incubation of larger measuring vessels, WTW offers the TS 1006-i thermostat cabinet as well as the IS 6-VAR stirrer platform, which has been specially designed for vessels with large base diameter.

Depletion/Respiration		
	Applications and Procedures	Measuring
Soil respiration	Soil analysis/ biodegradability of pollutants: laboratory method according to DIN 19 737	Aerobic using CO ₂ absorption, quantitative CO ₂ determination possible
Biodegradability	Determination according to OECD 301 F / DIN EN 29 408 / ISO 9408	Aerobic using CO ₂ absorption
Biogas determination	Determination of anaerobic degradation processes	Anaerobic, determination of CO ₂ + Methane
Microbiology	Growth and stress investigations: determination of the respiration rate	Aerobic, warning pressure possible

Determination of soil respiration

Laboratory method for determining the microbial soil respiration according to DIN 19 737.

OxiTop® Control B6/BM6

- Simple and precise
- Cost-efficient
- Optimum measuring vessels for subsequent quantitative determination of CO₂

Soil respiration measurements are used for forecasting, surveying and checking remediation work, for biodegradability measurements of substances (pesticides, fungicides, fertilizers, etc.) as well as for carrying out toxicity tests.

This determination is possible with the OxiTop® Control System and special, practically-tested measuring vessels in a very accurate, simple and favorably-priced way.

The expenditure for personnel and apparatus is considerably reduced when compared with conventional methods.

Soil respiration measurements can be carried out in 2 different types of vessel.

For actively respiring soils with strong CO₂ development the MG 1.0 measuring vessel is recommended: its large opening (approx. 3.9 in / 100 mm dia.) means that it can be easily used with large-volume CO₂ absorber vessels for afterwards quantitative CO₂ determination.

Example of application using PF/45... sample vessels

Example of application using MG/... measuring vessels

Determination of biodegradability

Laboratory procedures for determination of biodegradability according to DIN EN 29 408 / ISO 9408 / OECD 301 F

OxiTop® Control A6/A12

OxiTop® Control S6/S12

The determination of the biodegradability should be checked before “new” chemicals are used for the first time, not only for environmental reasons but also to minimize disposal charges.

The sample and a blank are stirred at a constant temperature for 28 days in closed bottles.

The CO₂ produced is removed from the gas space by means of an absorber so that the resulting negative pressure is a measure of the biodegradability.

The continuous recording of the values in the OxiTop®-C means that the required documentation can be guaranteed in an optimal manner.

The measuring bottles and adapters can be autoclaved at 249.8 °F (121 °C).

Biogas determination

Determination of anaerobic degradation processes: biogas determination

OxiTop® Control AN6/AN12

Anaerobic degradation processes take place in the absence of oxygen. In order to be able to fill the gas space above the sample with inert gas the measuring bottle has a septum sealed nozzle. When anaerobic degradation has taken place the dissolved CO₂ can be driven off and then removed from the gas space by means of a CO₂ absorber. The resulting pressure difference is proportional to the CO₂ concentration, the remaining overpressure is proportional to the methane concentration.

The degradation process can be comfortably followed in the "pressure" operating mode.

Determination of the Respiration Rate

Microbiological growth and stress investigations: determination of the respiration rate (aerobic/anaerobic measuring operation)

OxiTop® Control AN6/AN12

OxiTop® Control A6/A12

The use of special measuring bottles with a septum sealed nozzle allows the interference-free addition of substrates and solutions.

Pressure alterations could indicate a reduction in oxygen concentration, for example, which could make the addition of oxygen or air necessary (possibly other gases as well).

It is possible to set a "warning pressure" or a pressure limit so that the operator can carry out manipulations on the system.

The momentary pressure can be stored so that the manipulation is fully documented. The recording of measured values (max. 10 values) permits long-term measurement.

Incubators

OxiTop® Box

- Compact
- Precise
- Uniform temperature distribution

**Thermostat box with forced air circulation
for 68 °F (tolerance 67.1 - 68.9 °F / 20 ±0.5 °C)**

OxiTop® Box is a benchtop model with hinged clear-view cover which can accommodate a maximum of either 12 OxiTop® simultaneous measurements or 20 Karlsruhe bottles.

The chamber is equipped with a connection for an IS 6 or IS 12 stirrer.

A special compartment is provided for thermostating 6 methylene blue samples.

The box is made of non-corrosive materials and the compressor is CFC-free.

A cross-flow fan ensures uniform temperature distribution.

The box has an automatic defrosting system with condensate evaporation.

Example of an application:
OxiTop® Box with OxiTop® Control 12

Technical Data

Model	OxiTop® Box
Temperature control	68 °F (tolerance 67.1 - 68.9 °F) (20 °C ±0.5 °C)
Ambient temperature	Storage: -13 ... +122 °F (25 °C ... +50 °C) Operation: +50 ... 89.6 °F (+10 °C ... +32 °C)
Power consumption	200 W
Dimensions (H x W x D)	14.76 x 16.73 x 23.62 in (375 x 425 x 600 mm)
Weight	Approx. 30 kg

Ordering Information

BOD thermostat boxes		Order No.
OxiTop® Box	BOD OxiTop® Box, thermostat box with temperature-controlled forced ventilation for 230 V 50 Hz mains supply	208 432

Note: versions for 115 V / 60 Hz see brochure "Product Details"

Thermostat Cabinets

- Versatile
- Powerful
- Inexpensive

To incubate samples at a constant, desired temperature during the reaction period, a thermostat cabinet is necessary. WTW offers thermostat cabinets in various sizes with a variably adjustable temperature range of 50 °F - 104 °F (10 °C - 40 °C) and a power supply of 230 V/50 Hz. Temperature accuracy lies at ± 1 °C deviation from the set temperature.

As the samples must be additionally stirred the thermostat cabinets are fitted with internal sockets to provide the stirrers with electricity. 2 – 4 shelves are available, according to the thermostat cabinet size, thus enabling simultaneous thermostating of up to 48 standard BOD samples, or equipping with 4 IS 12 or IS 6-Var stirrer platforms.

The largest model TS 1006-i is especially suited for special applications, as the compartment height between the 4 shelves leaves enough space for 1.5 l vessels or flasks with side nozzles.

The sizes TS 606/2-i aTS 606/4-i are available with transparent insulating glass doors and especially suited for use in combination with the OxiTop® Control system, as data

can be called up through the closed glass door. This has the advantage that temperature fluctuations caused by opening the door can be avoided.

Technical Data

Model	TS 606/2-i	TS 606/3-i	TS 606/4-i	TS 1006-i
Shelves	2	3	4	4 widely spaced
